Section- 24KRG-1 'A'

Experiment-08

Aim:

(A) Problem Statement

A company maintains customer information, product information, and sales order information in three separate tables: customer_master, product_catalog, and sales_orders.

The company wants to provide an order report to an external client. The report must contain the Order ID, Order Date, Customer Name, Product Name, and Final Amount.

For every order, first calculate the Gross Amount using:

$$\text{Gross Amount} = \text{Unit Price} \times \text{Quantity}$$

Then calculate the Discount Amount using:

$$\text{Discount Amount} = \text{Gross Amount} \times \text{Discount Percentage} / 100$$

Finally, calculate the Final Amount using:

$$\text{Final Amount} = \text{Gross Amount} - \text{Discount Amount}$$

Create a complex view using the three tables to generate this report. The view should expose only the required five columns and should not expose the customer's phone/email, product brand/unit price, or the order's quantity/discount percentage.

The company also wants to provide access to an external client. Create a PostgreSQL user named client_user and give this user only SELECT permission on the view. The client must not have direct access to the three original tables and must not be allowed to modify the view data.

(B) Problem Statement

An e-commerce company wants to regularly analyze the performance of its product categories.

The company stores product, category, customer, and order information in separate tables. To generate the category performance report, the database needs to perform multiple JOINS, GROUP BY, aggregate functions, DISTINCT counting, calculated values, and CASE statements.

Since the same report is generated frequently, executing the complete analytical query every time can increase database workload.

Create a PostgreSQL Materialized View named: mv_category_sales

Tools / Platform Used:

- Windows
- PostgreSQL
- PgAdmin

Code and Output:

A.

```
Query  Query History
69      P.product_name,
70
71      (P.unit_price * O.quantity)
72      -
73      (
74          (P.unit_price * O.quantity)
75          * O.discount_percent / 100
76      ) AS final_amount
77
78  FROM customer_master C
79
80  JOIN sales_orders O
81      ON C.customer_id = O.customer_id
82
83  JOIN product_catalog P
84      ON P.product_id = O.product_id;
85
86  EXPLAIN ANALYZE
87  SELECT * FROM vw_PRODUCT_DISCOUNT_INFO;
88
89
90  CREATE USER KRG_1A
91  PASSWORD '1234';
