Branch: BE-CSE-AIML

Semester: 5

Subject: ADBMS

UID: 24BAI70006

Section/Group: 24AIT_KRG_1_A

Date of Performance: 31/07/26

Subject Code: 24CSP-310

Q.1

The screenshot shows the DataLemur interface for a SQL interview question titled "Final Account Balance". The question is sourced from PayPal and is marked as "Easy". The user, Waseem Akram, has a timer at 0:00. The question is marked as "Accepted". The user is encouraged to share the solution on LinkedIn or Twitter. The expected output is a table with columns "account_id" and "final_balance", showing values for accounts 301, 101, and 201. The user's solution is a SQL query that calculates the final balance for each account by summing deposits and subtracting withdrawals. The output of the user's query matches the expected output.

Final Account Balance
PayPal SQL Interview Question

Accepted

Congrats 🎉 - Share this problem, and your solution, on LinkedIn or Twitter!

In your post, don't forget to tag Nick Singh, so that he can comment on and share your post with his audience of 150k+ followers on [LinkedIn](#) and 25k+ followers on [Twitter](#) (which will give your post and profile more visibility)!

Output

account_id	final_balance
301	62.00
101	25.00
201	26.00

Expected

account_id	final_balance
301	62.00
101	25.00
201	26.00

Input PostgreSQL 14

```
1 SELECT
2   account_id,
3   SUM(
4     CASE
5       WHEN transaction_type = 'Deposit' THEN amount
6     ELSE -amount
7     END
8   ) AS final_balance
9 FROM transactions
10 GROUP BY account_id;
```

Output

account_id	final_balance
301	62.00
101	25.00
201	26.00

Run Code Submit

Solution:

```
SELECT
account_id,
SUM(
CASE
    WHEN transaction_type = 'Deposit' THEN amount
    ELSE -amount
END
) AS final_balance
FROM transactions
GROUP BY account_id;
```
